PROSPECTS OF PROFIT AND LOSSES

VONCERT Open End are tracker certificates which allow participating in an underlying instrument’s performance in a transparent way and with a single transaction. Any potential profit consists of the positive difference between the sales price achieved, i.e. the redemption price, and the purchase price. VONCERT Open End do not provide ongoing revenues. The value of the VONCERT Open End during their term is significantly influenced by the price development of the underlying instrument resp. its components.

A loss is made if the VONCERT Open End are sold or redeemed at a lower rate than the purchase price paid.

Such a loss scenario can arise if the underlying instrument develops negatively due to value-determining factors, such as interest rate developments and changes to the rating or creditworthiness of basket components. Therefore, the price of the VONCERT Open End may fall significantly below the issue price/purchase price during the term and/or on maturity, which results in a corresponding loss. VONCERT Open End have no capital protection. The maximum loss can lead to a loss of the capital invested.
Assumptions and limitations in preparing the market scenarios

The following market scenarios should afford the investor a simplified way of making an assessment of the significant factors that influence the investment performance of the certificate. For a precise analysis of the profit and loss scenarios, reference must be made to the formulas and definitions set out in this termsheet, (e.g. for "reimbursement"), because these scenarios have been deliberately simplified in order to make them better understandable. With the exception of those certificates for which one of the following factors is defined as the underlying (e.g. a currency certificate or a certificate of interest), the impact of these risk factors will be excluded from the simplified presentation of the scenario:

- Foreign currency risks
- Interest rate risks
- Volatility risks
- Issuer risk

Market scenarios

Fees and costs both stemming from the certificate and for the acquisition and holding of the certificate

Maximum gain: Underlying performance

Maximum loss: 100%

Positive scenario:
Indicative performance of the certificate: 0% to underlying performance
Necessary market performance of underlying:
- Proportional participation in positive market performance

Break even:
Indicative performance of the certificate: 0%
Necessary market performance of underlying:
- Closing price of underlying = reference price level at the time of the investment

Negative scenario:
Indicative performance of the certificate: Loss of up to 100% possible
Necessary market performance of underlying:
- Closing price of underlying is lower than the reference price level at the time of the investment

SIGNIFICANT RISKS FOR INVESTORS

Currency risks

If the underlying or underlyings is/are denominated in a currency other than the product's reference currency, investors should bear in mind that this may involve risks due to fluctuating exchange rates and that the risk of loss does not only depend on the performance of the underlying(s) but also on any unfavourable performance of the other currency or currencies. This does not apply for currency-hedged products (quanto structure).

Market risks

The general market performance of securities is dependent in particular on the development of the capital markets which, for their part, are influenced by the general global economic situation as well as by the economic and political framework conditions in the respective countries (so-called market risk). Changes to market prices such as interest rates, commodity prices or corresponding volatilities may have a negative effect on the valuation of the underlying(s) or the structured product. There is also the risk of market disruptions (such as trading or stock market interruptions or discontinuation of trading) or other unforeseeable occurrences concerning the respective underlyings and/or their stock exchanges or markets taking place during the term or upon maturity of the structured products. Such occurrences can have an effect on the time of redemption and/or on the value of the structured products.

In the event of trading restrictions, sanctions and similar occurrences, the issuer is entitled, for the purpose of calculating the value of the structured product, to include at its own discretion the underlying instruments at their most recently traded price, at a fair value to be established at its sole discretion or indeed as worthless, and/or additionally to suspend pricing in the structured product or liquidate the structured product prematurely.

Secondary market risks

Under normal market conditions, the issuer or the lead manager intend to post bid- and ask-prices on a regular basis. However, neither the issuer nor the lead manager is under any obligation with respect to investors to provide such bid- and ask-prices for specific order or securities volumes, and there is no guarantee of a specific liquidity or of a specific spread (i.e. the difference between bid- and ask-prices), for which reason investors cannot rely on being able to purchase or sell the structured products on a specific date or at a specific price.

Issuer risk

The value of structured products may depend not only on the performance of the underlying(s), but also on the creditworthiness of the issuer/guarantor, which may change during the term of the structured product. The investor is exposed to the risk of default of the issuer/guarantor. For further information on the rating of Vontobel Holding AG or Bank Vontobel AG, please see the issuance programme.
Classification
