Currency:	USD
Initial Reference Price:	USD 28.79
Ratio:	1
Cap:	USD 20.00
Reference Price:	Closing price of the reference agent (NYSE)

2. Risks

Risks at the end of the term

If the Reference Price of the Underlying is below the Cap on the Valuation Date, the investor shall receive a cash amount based on the Reference Price of the Underlying and the Ratio. Investors will suffer a loss if the cash amount is below the purchase price for the product plus transaction cost.
Most unfavourable scenario: total loss of the invested capital if the Underlying is worthless on the Valuation Date.

Currency Risks

The product is not currency protected (not Quanto) at maturity. The investor is therefore exposed to the risk that the exchange rate of the relevant currencies for the product will change to the disadvantage of the investor

Issuer risk / Credit risk

You are exposed to the risk that the Issuer and the Guarantor might be unable to fulfil their obligations in respect of the product and the guarantee – e.g. in the event of insolvency (inability to pay / over-indebtedness) or an administrative order of resolution measures. In case of a crisis of the Guarantor such an order can also be issued by a resolution authority in the run-up of an insolvency proceeding. Thereby the resolution authority has extensive intervention powers. Among other things, it can reduce rights of the investors to zero, terminate the guarantee or convert it into shares of the Guarantor and suspend rights of the investors. A total loss of your capital invested is possible. The product is a debt instrument and as such is not covered by any deposit protection scheme.

Cancellation / reinvestment risk

The issuer may, with immediate effect, extraordinary terminate the product if an defined event occurs. Examples of extraordinary events include the cessation of calculation of the Underlying or the index by the calculation agent. In this case, the redemption amount may possibly also be significantly below the purchase price. An, even a total loss of investment is possible.
Investors also bear the risk that the product will be terminated at a time unfavourable to them, and they may only be able to reinvest the redemption amount on less favourable terms. The investor bears this reinvestment risk also in case of an early redemption of the product.

Price risk

The investor bears the risk that the value of this product may be negatively influenced during the term of the product and might even fall significantly below the purchase price, in particular due to market price-determining factors mentioned below:

- the price of the Underlying decreases;
- the general level of interest rates rises;
- expectations with regard to future dividend distributions of the Underlying increases;
- the currency of the Underlying will be devalued of the trading currency;
- volatility (key figure for frequency and intensity of expected price fluctuations of the Underlying) increases; and
- a deterioration in the issuer’s or guarantor’s credit rating.

These factors can conversely increase the value of the product. Single factors can cancel each other out or amplify each other.

Risks in case of missing price quotations by the Market Maker

The product can usually be bought or sold on or off exchange from the date of listing. Under normal market conditions, Bank Vontobel Europe AG, Munich, (Market Maker) will post indicative (non-binding) bid and ask prices on a continuous basis (Market Making). However, there is no legal obligation on the Market Maker to do so. The Market Maker determines the bid and ask prices using standard pricing models while taking into account market price-determining factors. Thus unlike in stock-exchange trading, e.g. equities, the price is not directly derived from supply and demand. In extraordinary market situations or in the event of technical faults, it may temporarily become more difficult or impossible to purchase or sell the product. If the Market Maker does not quote any purchase prices, the product may not be sold or be sold at a large discount.
