Constant Leverage Certificate on 16X Long Index linked to Nasdaq-100 Index® V2
ISIN: DE000VE9SX88
Product Manufacturer: Bank Vontobel Europe AG, Frankfurt/Main Branch, Germany, website: https://bourse.vontobel.com
Call 0800 911 322 for more information
Issuer: Vontobel Financial Products GmbH, Frankfurt/Main, Germany, with a product guarantee by Bank Vontobel Europe AG (Guarantor)
Competent Authority: Federal Financial Supervisory Authority (BaFin), Germany
This document was created on 2 May 2020, 01:38 (local time Frankfurt/Main)

You are about to purchase a product that is not simple and may be difficult to understand.

What is the product?
Type Debt instrument in bearer dematerialised form, evidenced by book-entries, governed by German law.
Objectives The objective of this product is to provide you with disproportionate (leveraged) participation in any price movement of the Underlying's Reference Instrument. This has the effect, inter alia, that you are exposed to a very high risk of a total loss of your investment. The product is a complex financial instrument linked to one Underlying (16X Long Index linked to Nasdaq-100 Index® V2).

The product does not have a fixed term. You may exercise the product on any Exercise Date. The Issuer has the right to terminate the product on any Termination Date. After exercise or termination, you will receive a Redemption Amount on the relevant Redemption Date. The redemption amount will correspond to the Reference Price of the Underlying on the relevant Exercise or Termination Date, multiplied by the Ratio.

Underlying The Underlying is linked to the Reference Instrument and is calculated by the Index Calculation Agent. It reflects price movements in the Reference Instrument leveraged by a factor of 16 (Leverage).

An increase in the price of the Reference Instrument since the most recent calculation of an Underlying closing value results in a positive change of the Underlying as compared to the previous price of the Underlying and vice-versa. The Underlying therefore replicates a "long" strategy. The Underlying consists of a leverage component and a financing component.

The leverage component tracks an investment in the Reference Instrument, whereby movements in the price of the Reference Instrument are multiplied by the Leverage. This leverage effect occurs with either positive or negative movements in the Reference Instrument, having a disproportionate effect on the value of the Underlying. For example (leaving aside the financing component):
- A decrease in the price of the Reference Instrument by 2% results in a decrease in the Underlying by 16 x 2%;
- An increase in the price of the Reference instrument by 2% results in an increase in the Underlying by 16 x 2%.

Movements of the price of the Reference Instrument are always tracked with reference to its most recent Valuation Price. In case of a sharp decline of the Reference Instrument reaching the Barrier such level of the Reference Instrument is set as new Valuation Price. This automatic intraday adjustment is designed to prevent the Underlying from reaching negative values. However, the mechanism does not prevent you from suffering a loss up to total loss. The financing component reflects the capital costs (see Interest Rate and Financing Spread below) that would be incurred to finance the corresponding investment in the Reference Instrument. In addition, the Index Calculation Agent charges a fee for the calculation and administration of the Underlying (Index Fee). The financing component therefore reduces the value of the Underlying and the product.

Interest Rate, Financing Spread and Index Fee are included in the calculation of the Underlying daily on a pro-rata basis.

Due to the daily adjustment of the Valuation Price, the Underlying and the Reference Instrument generally do not move in parallel over a period longer than one day; the likelihood that they will follow significantly different courses increases with each passing day. In particular, daily up-and-down fluctuations of the Reference Instrument will lead to completely different price movements of the Underlying and the Reference Instrument within a few days; this can result in a decrease of the price of the Underlying although the Reference Instrument price increases over a particular period of time.

Due to the leverage effect in the Underlying, price losses of the Reference Instrument can significantly increase price losses on the product. If the price of the Reference Instrument decreases significantly, the value of the Underlying will fall to a very low level. Subsequent – even significant – gains in the price of the Reference Instrument would only have a minor effect on the recovery of the Underlying as the starting level for a recovery in the value of the Underlying would then be very low due to the daily (or even intraday) adjustment of the Underlying to the most recent Valuation Price of the Reference Instrument.

The redemption amount will be translated from the currency of the Underlying into the currency of the product.

What you might get back after costs

The product is designed for investors with

EUR 10,000

NASDAQ, Inc.

4

If the Issuer and the Guarantor are not able to pay you what is owed, you could lose your entire investment.

under different scenarios, assuming that you invest EUR 10,000.

This product does not include any protection from future market performance so you

seek to disproportionately participate in price changes and / or to hedge

what in the future.

The amounts shown here are the cumulative costs of the product itself. The figures assume you invest EUR 10,000.00. The figures are estimates and may

account one-off, ongoing and incidental costs.

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into

1 calendar day

12.18%

This table shows the money you could get back at the end of the sample period, under different scenarios, assuming that you invest EUR 10,000. The

scenarios shown illustrate how your investment could perform. The figures are not calculated per year, but for the sample period. Figures in this section and “What are the costs?” are not comparable with figures on products with a recommended holding period that deviates from the sample period. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where the Issuer and the Guarantor are not able to pay you. The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What happens if Vontobel Financial Products GmbH is unable to pay out?

You are exposed to the risk that the Issuer and the Guarantor might be unable to fulfill their obligations in respect of the product and the guarantee – e.g. in the event of insolvency (inability to pay / over-indebtedness) or an administrative order of resolution measures. In case of a crisis of the Guarantor such an order can also be issued by a resolution authority in the run-up of an insolvency proceeding. Thereby the resolution authority has extensive intervention powers. Among other things, it can reduce rights of the investors to zero, terminate the guarantee or convert it into shares of the Guarantor and suspend rights of the investors.

A total loss of your capital invested is possible. The product is a debt instrument and as such is not covered by any deposit protection scheme.

What are the costs?

Costs over time

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into

account one-off, ongoing and incidental costs.

The amounts shown here are the cumulative costs of the product itself. The figures assume you invest EUR 10,000.00. The figures are estimates and may change in the future.

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

**How long should I hold it and can I take money out early?**

**Recommended Holding Period: 1 calendar day (Sample period)**

It is not possible to individually recommend a holding period. Due to the leverage the product reacts to smallest price movements of the Underlying leading to losses or profits within unpredictable time periods. Any individual recommendation regarding the holding period would be misleading information for a speculative investor. For investors purchasing the product for hedging purposes the holding period depends on the hedging horizon of the individual investor.

You may exercise the product on the Exercise Dates by instructing your depository bank to (1) transmit an Exercise Notice to Bank Vontobel AG, Zurich (Exercise Agent) in accordance with the notice period, and to (2) transfer the exercised products to the Exercise Agent. Upon effective exercise you will receive a Redemption Amount as described in more detail under “What is this product?” above. In addition, you may cash in the product earlier by selling the product through the exchange where the product is listed or outside of such exchange. If you should sell the product instead of exercising it, the amount you will receive could be lower than the amount you would have otherwise received.
